

NeuroPaint

Manjari Anant, Morgan Graham, Usman Khan

Inspiration

Jon, who had an incomplete spinal cord injury for many years, is grateful for his ability to play the guitar after regaining motor function.

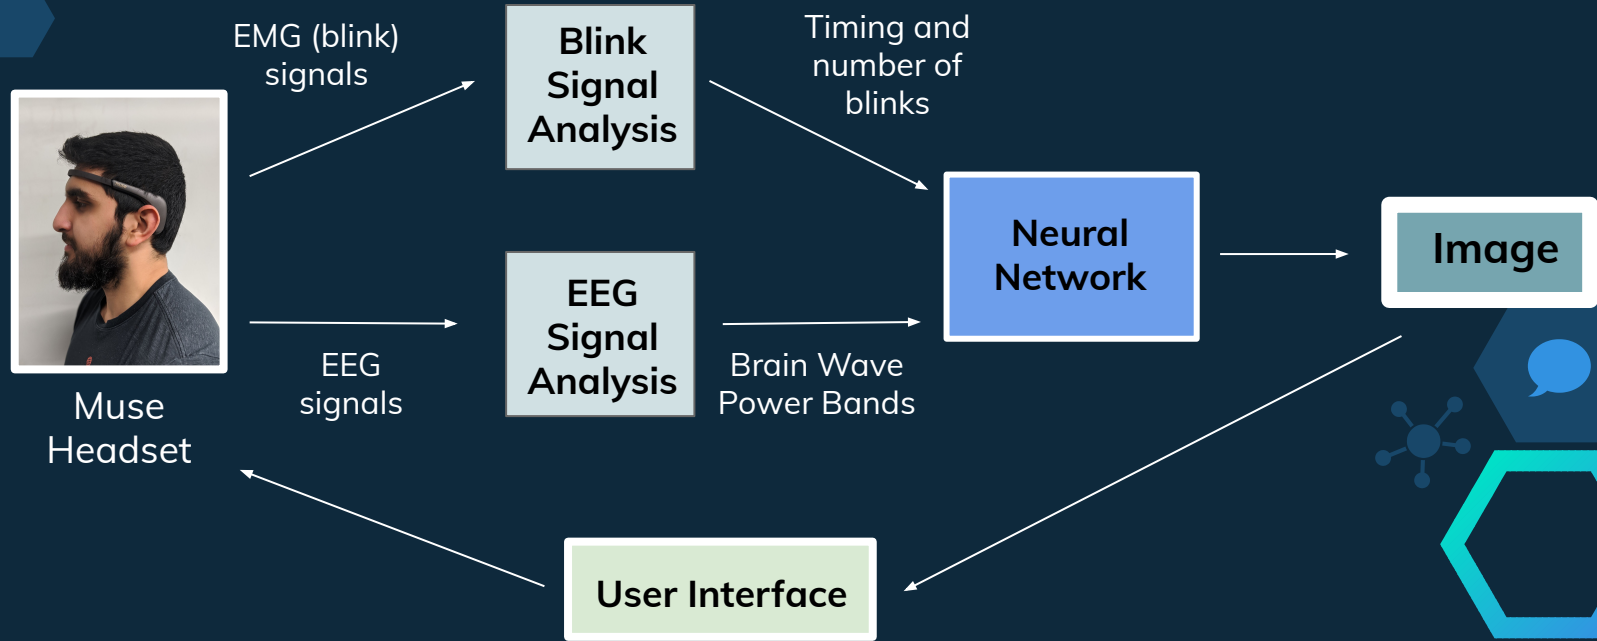

Goals

1. Give individuals with loss of motor function a platform for creative expression
2. Create a multi-faceted experience where loss of motor function has no impact on the ability to create
3. Align with the mission of CNT through significantly improving the quality of life for movement-impaired individuals

Project Overview

Blinking

Muse data EEG/EMG signal

Blinking filter

Number and timing of blinks

Neural Network

EEG Brain Wave Analysis

Brain Waves of Interest:

- ❖ Alpha Waves (8 - 12 Hz) - relaxation and daydreaming
- ❖ Beta Waves (12 - 30 Hz) - normal state of consciousness/alertness

Time-Domain Signal

Frequency-Domain Signal

Extract power
signal data

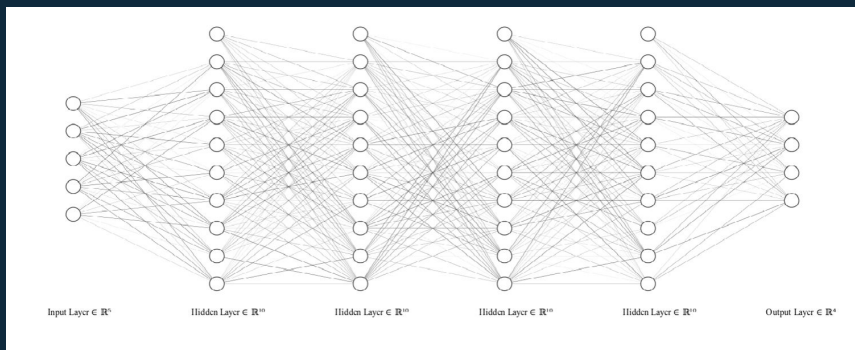

Alpha to Beta power
signal ratio

Neural
Network

Neural Network

- ❖ Neural Network architecture is used to navigate a wide array of possible images with few inputs while maintaining smoothness
- ❖ Parameters tweaked by input from EEG analysis:
 - Network size/dimensions (blinks)
 - Color mode (brain waves)
 - (Future) activation function, initial weight distribution

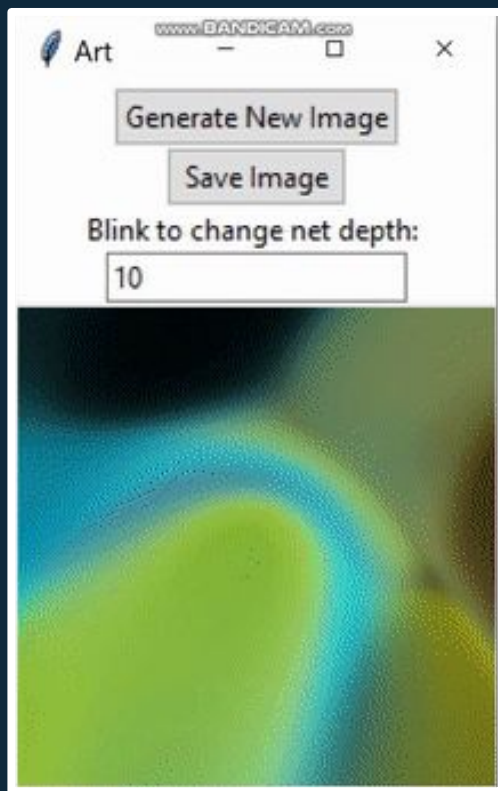

Restful State

Post CNT
hackathon

Restful State

Quitting
engineering to
become an
artist

Alert State

Alert State

Image Evolution

Ethical Considerations

Potential misrepresentation of brain state

Sharing of brain state indicators

Ownership of algorithmically generated art

Extensions

- ❖ Further develop UI
- ❖ Eye tracking
- ❖ Hololens integration
- ❖ EMG signal integration

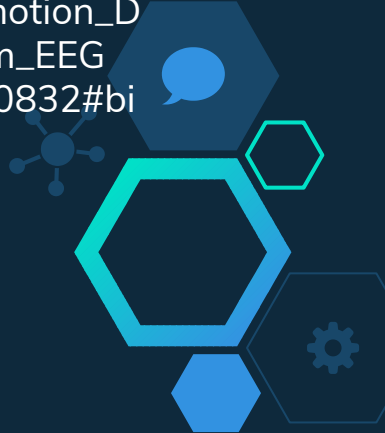

Microsoft
HoloLens

Acknowledgements

We would like to acknowledge Courtnie Paschall and the members of the CNT for their guidance and support during our project.

Thank you to the CNT for giving us this opportunity!

Thank you!
